- 1 All questions should be attempted.
- 2 Necessary data will be found in the Data Booklet provided for Chemistry at Standard Grade and Intermediate 2.
- 3 The questions may be answered in any order but all answers are to be written in this answer book, and must be written clearly and legibly in ink.
- 4 Rough work, if any should be necessary, as well as the fair copy, is to be written in this book.
Rough work should be scored through when the fair copy has been written.
- 5 Additional space for answers and rough work will be found at the end of the book.
- 6 The size of the space provided for an answer should not be taken as an indication of how much to write. It is not necessary to use all the space.
- 7 Before leaving the examination room you must give this book to the invigilator. If you do not, you may lose all the marks for this paper.

PART 1

In Questions 1 to 8 of this part of the paper, an answer is given by circling the appropriate letter (or letters) in the answer grid provided.

In some questions, two letters are required for full marks.

If more than the correct number of answers is given, marks will be deducted.

A total of 20 marks is available in this part of the paper.

SAMPLE QUESTION

A	CH ₄	B	H ₂	C	CO ₂
D	CO	E	C ₂ H ₅ OH	F	C

(a) Identify the hydrocarbon.

☐ A	☐ B	☐ C
☐ D	☐ E	☐ F

The one correct answer to part (a) is A. This should be circled.

(b) Identify the **two** elements.

☐ A	☐ B	☐ C
☐ D	☐ E	☐ F

As indicated in this question, there are **two** correct answers to part (b). These are B and F. Both answers are circled.

If, after you have recorded your answer, you decide that you have made an error and wish to make a change, you should cancel the original answer and circle the answer you now consider to be correct. Thus, in part (a), if you want to change an answer A to an answer D, your answer sheet would look like this:

☒ A	☐ B	☐ C
☐ D	☐ E	☐ F

If you want to change back to an answer which has already been scored out, you should enter a tick (✓) in the box of the answer of your choice, thus:

✓ ☒ A	☐ B	☐ C
☒ D	☐ E	☐ F

Marks

KU PS

1. The grid contains the names of some elements.

A	copper	B	magnesium	C	iron
D	nitrogen	E	potassium	F	fluorine

- (a) Identify the element discovered in 1807.

You may wish to use page 8 of the data booklet to help you.

A	B	C
D	E	F

1

- (b) Identify the element found in the same group as calcium.

You may wish to use page 8 of the data booklet to help you.

A	B	C
D	E	F

1

- (c) Identify the **two** elements which combine to form a covalent compound.

A	B	C
D	E	F

1

(3)

2. The grid shows the names of some metals.

A	lithium	B	gold	C	iron
D	zinc	E	calcium	F	magnesium

(a) Identify the metal found uncombined in the Earth's crust.

A	B	C
D	E	F

1

(b) Identify the metal produced in a blast furnace.

A	B	C
D	E	F

1

(c) Identify the metal used as the catalyst in the Haber process.

A	B	C
D	E	F

1

(3)

Marks

3. The grid shows the names of some hydrocarbons.

A	methane	B	hexane	C	pentane
D	ethene	E	butene	F	propane

- (a) Identify the hydrocarbon with **six** carbon atoms in the molecule.

A	B	C
D	E	F

1

- (b) Identify the **two** hydrocarbons which are alkenes.

A	B	C
D	E	F

1

6. The grid below shows the names of some oxides.

A	iron oxide	B	copper oxide	C	potassium oxide
D	calcium oxide	E	lead oxide	F	nitrogen dioxide

- (a) Identify the oxide produced by the sparking of air in car engines.

A	B	C
D	E	F

1

- (b) Identify the oxide which contains an alkali metal.

A	B	C
D	E	F

1

- (c) Identify the oxide which dissolves in water to produce an acidic solution.

A	B	C
D	E	F

7. The grid shows some statements which can be applied to different solutions.

A	It has a pH of 7.
B	It reacts with silver.
C	It conducts electricity.
D	It produces chlorine when electrolysed.

- (a) Identify the statement which is correct for water but **not** for dilute hydrochloric acid.

A
B
C
D

1

- (b) Identify the statement which is correct for **both** dilute hydrochloric acid and dilute sulphuric acid.

A total of 40 marks is available in this part of the paper.

-

1

-
- The diagram shows a test tube inverted in a trough of lime water. A burning candle is placed inside the test tube, with its flame just above the lime water level. Labels with leader lines identify the 'air' in the upper part of the test tube, the 'burning candle', and the 'lime water' in the trough.

11. The pie chart shows the uses of ethanoic acid.

- (a) Draw a bar graph to show the information in the pie chart.
Use appropriate scales to fill most of the graph paper.
(Additional graph paper, if required, can be found on page 23.)

2

11. (continued)

Marks

KU PS

- (b) The diagram shows a molecule of ethanoic acid.

Write the molecular formula for ethanoic acid.

1

- (c) Describe how you would use universal indicator or pH paper to measure the pH of ethanoic acid solution.

1

- (d) Complete the sentence below by circling the correct answer.

Diluting an ethanoic acid solution with water will

increase
 not change
 decrease

} the pH number.

1

- (e) Name the ion present in **all** acidic solutions.

12. The Falkirk Wheel is a steel structure which carries boats from one level of the canal to another.

- (a) The Falkirk Wheel is painted to prevent rusting.

How does painting prevent rusting?

1

- (b) Suggest another method of preventing steel from rusting.

1

- (c) (i) Steel is an alloy

What is meant by the term alloy?

1

- (ii) The table gives information on the hardness of some steel alloys.

<i>Carbon present in steel alloy/%</i>	<i>Hardness/units</i>
0.1	123
0.2	157
0.3	190
0.4	220
0.5	260

Predict the hardness of a steel alloy containing 0.6% carbon.

13. Naveed carried out an experiment to investigate the reactivity of metals with dilute sulphuric acid.

- (a) Place the metals in order of reactivity (most reactive first).

1

- (b) Name the gas produced when a metal reacts with dilute sulphuric acid.

1

- (c) What would happen to the rate of the reaction if Naveed repeated the experiment using a higher concentration of sulphuric acid?

14. Cracking long-chain hydrocarbons produces smaller, more useful molecules.

One of the reactions taking place is:

- (a) Draw a structural formula for octane.

1

- (b) (i) Write the molecular formula for **X**.

1

- (ii) **X** decolourises bromine solution.

What does this indicate about **X**?

1

- (c) 0.1 g of aluminium oxide was used as a catalyst.

- (i) What mass of aluminium oxide will be present at the end of the experiment?

_____ g

1

- (ii) Write the formula for aluminium oxide.

1

(5)

(a) (i) Give **one** advantage of using a battery rather than mains electricity.

17. (a) A technician set up the following experiment to electrolyse molten lead iodide.

- (i) In the diagram, the technician has left out a piece of apparatus needed to electrolyse molten lead iodide.

Name the piece of apparatus which has been left out of the circuit.

1

- (ii) During electrolysis, the lead iodide is broken down into its elements.

Write a **word** equation for this reaction.

1

- (b) Why do ionic compounds, like lead iodide, **not** conduct electricity when **solid**?

1

- (c) Name the non-metal element which can be used as the electrodes.
