Where the publication includes materials from sources other than SQA (secondary copyright), this material should only be reproduced for the purposes of examination or assessment. If it needs to be reproduced for any other purpose it is the centre's responsibility to obtain the necessary copyright clearance. SQA's NQ Assessment team may be able to direct you to the secondary sources.

These Marking Instructions have been prepared by Examination Teams for use by SQA Appointed Markers when marking External Course Assessments. This publication must not be reproduced for commercial or trade purposes.

## Part One: General Marking Principles for Chemistry Higher

This information is provided to help you understand the general principles you must apply when marking candidate responses to questions in this Paper. These principles must be read in conjunction with the specific Marking Instructions for each question.

- (a) Marks for each candidate response must always be assigned in line with these general marking principles and the specific Marking Instructions for the relevant question. If a specific candidate response does not seem to be covered by either the principles or detailed Marking Instructions, and you are uncertain how to assess it, you must seek guidance from your Team Leader/Principal Assessor.
- (b) Marking should always be positive ie, marks should be awarded for what is correct and not deducted for errors or omissions.

### GENERAL MARKING ADVICE: Chemistry Higher

The marking schemes are written to assist in determining the “minimal acceptable answer” rather than listing every possible correct and incorrect answer. The following notes are offered to support Markers in making judgements on candidates’ evidence, and apply to marking both end of unit assessments and course assessments.

#### *General information for markers*

The general comments given below should be considered during all marking.

- 1 Marks should **not** be deducted for incorrect spelling or loose language as long as the meaning of the word(s) is conveyed.

**Example:** Answers like ‘distilling’ (for ‘distillation’) and ‘it gets hotter’ (for ‘the temperature rises’) should be accepted.

- 2 A right answer followed by a wrong answer should be treated as a cancelling error and no marks should be given.

**Example:** What is the colour of universal indicator in acid solution?

The answer ‘red, blue’ gains no marks.

- 3 If a right answer is followed by additional information which does not conflict, the additional information should be ignored, whether correct or not.

**Example:** Why can the tube not be made of copper?

If the correct answer is related to a low melting point, ‘It has a low melting point and is coloured grey’ would **not** be treated as having a cancelling error.

- 4 Full marks are usually awarded for the correct answer to a calculation on its own; the part marks shown in the marking scheme are for use when working is given. An exception is when candidates are asked to ‘Find, by calculation, .....’.
- 5 A half mark should be deducted in a calculation for each arithmetic slip.
- 6 A half mark should be deducted for incorrect or missing units **only when stated in the marking scheme**. No marks should be deducted for incorrect or missing units at intermediate stages in a calculation.

- 7 Where a wrong numerical answer (already penalised) is carried forward to another step, no further penalty is incurred provided the result is used correctly.
- 8 Ignore the omission of one H atom from a full structural formula provided the bond is shown.
- 9 With structures involving an – OH or an – NH<sub>2</sub> group, a half mark should be deducted if the 'O' or 'N' are not bonded to a carbon, ie OH–CH<sub>2</sub> and NH<sub>2</sub>–CH<sub>2</sub>.
- 10 When drawing structural formulae, a half mark should be deducted if the bond points to the 'wrong' atom, eg

- 11 A symbol or correct formula should be accepted in place of a name **unless stated otherwise in the marking scheme**.
- 12 When formulae of ionic compounds are given as answers it will only be necessary to show ion charges if these have been specifically asked for. However, if ion charges are shown, they must be correct. If incorrect charges are shown, no marks should be awarded.
- 13 If an answer comes directly from the text of the question, no marks should be given.

**Example:** A student found that 0.05 mol of propane, C<sub>3</sub>H<sub>8</sub> burned to give 82.4 kJ of energy.

Name the kind of enthalpy change which the student measured.

No marks should be given for 'burning' since the word 'burned' appears in the text.

- 14 A guiding principle in marking is to give credit for (partially) correct chemistry rather than to look for reasons not to give marks.

**Example 1:** The structure of a hydrocarbon found in petrol is shown below.

Name the hydrocarbon.

Although the punctuation is not correct, '3, methyl-hexane' should gain the full mark.

**Example 2:** A student measured the pH of four carboxylic acids to find out how their strength is related to the number of chlorine atoms in the molecule. The results are shown.

| Structural formula     | pH   |
|------------------------|------|
| CH <sub>3</sub> COOH   | 1.65 |
| CH <sub>2</sub> ClCOOH | 1.27 |
| CHCl <sub>2</sub> COOH | 0.90 |
| CCl <sub>3</sub> COOH  | 0.51 |

How is the strength of the acids related to the number of chlorine atoms in the molecule?

Although not completely correct, an answer such as 'the more Cl<sub>2</sub>, the stronger the acid' should gain the full mark.

- 15 Unless the question is clearly about a non-chemistry issue, eg costs in industrial chemistry, a non-chemical answer gains no marks.

**Example:** Why does the (catalytic) converter have a honeycomb structure?

A response such as 'to make it work' may be correct but it is not a chemical answer and the mark should not be given.

- 16 When it is very difficult to make a decision about a partially correct answer, a half mark can be awarded.
- 17 When marks have been totalled, a half mark should be rounded up.

## Part Two: Marking Instructions for each Question

### Section A

| Question | Acceptable Answer(s) |
|----------|----------------------|
| 1        | A                    |
| 2        | D                    |
| 3        | D                    |
| 4        | B                    |
| 5        | C                    |
| 6        | A                    |
| 7        | C                    |
| 8        | C                    |
| 9        | A                    |
| 10       | A                    |
| 11       | C                    |
| 12       | D                    |
| 13       | B                    |
| 14       | A                    |
| 15       | B                    |
| 16       | C                    |
| 17       | C                    |
| 18       | B                    |
| 19       | B                    |
| 20       | A                    |

| Question | Acceptable Answer(s) |
|----------|----------------------|
| 21       | B                    |
| 22       | D                    |
| 23       | C                    |
| 24       | D                    |
| 25       | B                    |
| 26       | D                    |
| 27       | D                    |
| 28       | A                    |
| 29       | A                    |
| 30       | B                    |
| 31       | C                    |
| 32       | B                    |
| 33       | A                    |
| 34       | C                    |
| 35       | D                    |
| 36       | B                    |
| 37       | A                    |
| 38       | B                    |
| 39       | D                    |
| 40       | D                    |

## Section B

| Question |   |    | Acceptable Answer/s                                                                                                                                                                                                                                              | Max Mark | ½ mark | Unacceptable                                 |
|----------|---|----|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|--------|----------------------------------------------|
| 1        | a |    | <b>Completed table in order:</b><br>Metallic (metal)<br>Network (lattice)<br>Covalent<br>Molecular (discrete)<br><br>2/3 pieces of info (1 mark)<br>4 pieces of info (2 marks)                                                                                   | 2        |        |                                              |
| 1        | b |    | Delocalised / free electrons                                                                                                                                                                                                                                     | 1        |        | Free charge carriers; dissociated electrons  |
| 1        | c |    | Increasing nuclear charge / increasing number of protons (pulls electrons closer)                                                                                                                                                                                | 1        |        | Increased atomic number/ number of electrons |
| 2        | a |    | Naphtha ( Naphtha misspelling OK)                                                                                                                                                                                                                                | 1        |        | Gasoline                                     |
| 2        | b | i  |  <p>Any correct structural formula but if full shown general MI no 8 applies or one missing bond to a hydrogen missing with H shown. Suspend MI 10, accept CH<sub>3</sub></p> | 1        |        | A missing bond between two carbons           |
| 2        | b | ii | Aromatic (hydrocarbons) <b>OR</b> cycloalkanes or cyclic (hydrocarbons)                                                                                                                                                                                          | 1        |        | Specific compounds                           |

| Question |   |    | Acceptable Answer/s                                                                                                                                                                                                       | Max Mark | ½ mark | Unacceptable                                                                                                                   |
|----------|---|----|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|--------|--------------------------------------------------------------------------------------------------------------------------------|
| 2        | c | i  | <p>Two factors are:</p> <p>Not too high as to denature enzyme<br/>(½ mark)</p> <p>High enough to give fast reaction<br/>optimum / most efficient temperature<br/>(½ mark)</p> <p>(Focus of answer must be the enzyme)</p> | 1        |        | <p>Not too high to kill the enzyme. Boiling point of compounds</p> <p>flammability</p> <p>pH / cost</p> <p>Increased yield</p> |
